Technical Data Sheet

C.W

(Migration prevention washing agent of Dyestuffs)

CW is a good washing agent for cotton or its blends dyed with reactive dyestuff and it shows good efficiency on improvement of wet fastness and a migration prevention of uncreated / hydrolysed dyestuffs.

SPECIFICATION

- **APPERANCE** : White Powder
- **IONIC NATURE** : Nonionic
- **P^H (1% aq. solution)** : 7.0+/_1.0
- **SOLUBILITY** : Easily soluble in cold water
- **STORAGE STABILITY** : Min 1 year under cool and dry conditions,
If stored in original sealed packaging
- **COMPATABILITY** : Compatible with anionic and nonionic materials
- **FEATURES**

- 1) **CW** can reduce the number of times of A washing process more then once because it has excellent washing effect therefore it can shoe effect of both shortening of work time and energy economy
- 2) Because **CW** has more excellent washing Effect than surfactant , it removes residue Of uncreated/ hydrolysed dyestuffs to the Maximum in a short time Therefore it show Good effect on increasing wet fastness and In a washing process of printed product
- 3)**CW** doesn't cause reversible reaction and Hydrolysis toward to fixed dyestuffs And it does not adversely affect various kinds of fastnesses
- 4)Because its aq.sol 'n forms uniform colloidal **CW** acts as a solvent of fallen dyestuff particles It hasn't affinity to textile Therefore it shows Excellent effect on preventing redeposit ion or On migration unfixed residue on fiber
