

Qualix-LBR-100 **(Lubricating Agent)**

Lube-100 is newly developed assistant. This is good that scouring for synthetic detergent, cotton, viscose rayon, desizing and wetting for dyeing, crease, and dispersing level agent in rotary washer. Especially, Lube-100 is good for guarding crease. To use cycling equally, this gives high quality finish.

Properties

Appearance : White color granulated powder

Composition: High polymer compound conc.100%

Ionic Nature: Weak anionic

pH(1% sol.) : 7.5 +/- 0.5

Solubility : 50 °C stirring resolution

Characteristics

1. Lube-100 solves perfectly the problem of crease caused when dyeing and finishing of Tencel. Also, it can be obtained the even rising fine-hair effect by using to sand-washing finishing process
2. When use lube-100 to dyeing and finishing process. It can decrease the using quantity of the finishing agent by improvement of touch of dyed fabrics.
3. Lube-100 solves the problem of crease of cotton knit specially 10's, 20's when dyeing and finishing.
4. Lube-100 is non forming type and it increase the operating efficiency of low bath ratio M/C such as M/c ect. By improvement of circulation of the dyed fabrics.
5. It has no a bad influence on the next process because it has the excellent washing off properly.
6. It does not raise colored drip because it is strong for acid, alkali and sodium chloride.

It can be diluted 98 times in water

Method of using

Though it depends on the kind of fabric and work out condition. Generally use 0.1-0.3% (o.w.f.)

Caution

Please use it after sufficient mixture in service tank because it is granulated powder.
